FibaLath

Fiberglass alternative to metal lath

Product Overview

FibaLath is an innovative fiberglass lath for use in stucco applications and exterior/interior manufactured stone and brick facades. The unique patented three dimensional profile of FibaLath is self-furring and attaches the same way as metal lath. FibaLath is also lightweight and pliable making it easier and safer to cut and carry compared to metal lath.

Benefits

- Alkali-resistant for long term performance - will not rust or rot
- Non-directional which means it can be applied vertically or horizontally
- Over 4 times lighter than metal lath (per unit area)
- Meets International Building Code® (IBC) and International Residential Code® (IRC)

Specifications

Brand	FibaLath
Available widths	39
Available lengths	25, 55, 150
Color	Grey
